Summary

Software Engineer experienced in building high-throughput systems (5k–10k jobs/day) using C#/.NET, React, TypeScript and Python. Designed scalable APIs and event-driven microservices powering platforms with 3k+ active users. Built multi-cloud (AWS, GCP) automation to scale infrastructure based on usage patterns, reducing cloud costs by \$7,000/month.

Education

Indian Institute of Information Technology Guwahati (IIITG)

2021 - 2025

B.Tech in Computer Science Engineering

Professional Experience

Software Engineer at Connection Loops

Aug 2025 – Present

- **CLJPS – Distributed Job Processing System:** Built a distributed job-processing system using C#/.NET and NATS, handling 5k+ jobs/day with high throughput and low latency. Designed event-driven architecture for asynchronous processing, improving scalability and reliability.
- **Push Notifications (FCM Infrastructure):** Architected scalable push notification system using C#/.NET and Firebase Cloud Messaging (FCM), enabling real-time notifications across workflows. Built configurable framework supporting 10k+ notifications/month.
- **Daily Subscription System:** Developed subscription management system using .NET, React, TypeScript, and REST APIs, serving 3k+ active users and generating \$4k+ annual revenue. Automated billing workflows, reducing manual intervention.
- **B2B Billing & Dashboard:** Built billing and invoicing dashboards using React, TypeScript, and REST APIs, supporting 1000+ invoices/month. Improved operational visibility and contributed \$500+/month revenue.
- **System Optimizations:** Reduced storage usage by 15% via background cleanup services and optimized backend workflows, improving system efficiency and reducing operational overhead.

Software Engineer at Alteryx Inc.

Jan 2025 – Jun 2025

- **Multi-Cloud Cost Optimization & Scaling:** Built Python automation to dynamically scale Kubernetes clusters and databases across AWS and GCP based on usage patterns. Executed via EventBridge + Lambda and Cloud Scheduler + Cloud Functions, reducing cloud costs by \$7,000/month.
- **Cloud Cost Optimization Platform:** Built infrastructure automation workflows using Terraform, AWS, GCP, and CI/CD pipelines, enabling efficient provisioning and cost control across environments.
- **Monitoring & Reliability:** Implemented Datadog and Slack-based monitoring pipelines, improving failure detection coverage by 40% and reducing deployment failures by 10%.

Technical Skills

Backend: .NET Core, C#, REST APIs, Distributed Systems, Microservices, Event-Driven Architecture, Message Queues (NATS), System Design, Scalability

Full Stack: MERN (MongoDB, Express.js, React.js, Node.js)

Languages: C#, TypeScript, JavaScript, C++, Python, SQL

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitLab CI/CD, Terraform, Infrastructure as Code (IaC), Serverless

Tools: Postman, Swagger, Git, Datadog, Firebase, FCM

Databases: MySQL, MongoDB

Achievements

- **ACM ICPC 2024 Regionalist** (Team: Algo Primes).
- **Google Kickstart Rank 1422.**
- **LeetCode Top 2%** (1000+ problems solved, Max Rating: 2059).
