Summary

Software Engineer with 1+ year experience building high-throughput distributed systems (5k–10k jobs/day) using C#/.NET, AWS, and React. Immediate joiner skilled in microservices, event-driven architecture, and scalable API development, powering platforms used by 3k+ active users and generating \$4k+ annual revenue.

Core Competencies

Distributed Systems, Microservices, Event-Driven Architecture, REST APIs, Scalable Systems, System Design, AWS, Kubernetes, Docker, CI/CD, Terraform, Infrastructure as Code, .NET Core, C#, Message Queues (NATS), Performance Optimization, Cloud Architecture

Education

Indian Institute of Information Technology Guwahati (IIITG)
B.Tech in Computer Science Engineering

2021 - 2025

Professional Experience

Software Engineer at Connection Loops

Aug 2025 – Present

- **CLJPS – Distributed Job Processing System:** Built a distributed job-processing system using C#/.NET and NATS, handling 5k+ jobs/day with high throughput and low latency. Designed event-driven architecture for asynchronous processing, improving scalability and reliability.
- **Push Notifications (FCM Infrastructure):** Architected scalable push notification system using C#/.NET and Firebase Cloud Messaging (FCM), enabling real-time notifications across workflows. Built configurable framework supporting 10k+ notifications/month.
- **Daily Subscription System:** Developed subscription management system using .NET and REST APIs, serving 3k+ active users and generating \$4k+ annual revenue. Automated billing workflows, reducing manual intervention.
- **B2B Billing & Dashboard:** Built billing and invoicing module with React and REST APIs, supporting 1000+ invoices/month. Improved operational visibility and contributed \$500+/month revenue.
- **System Optimizations:** Reduced storage usage by 15% via background cleanup services and optimized backend workflows, improving system efficiency and reducing operational overhead.

DevOps Engineer at Alteryx Inc.

Jan 2025 – Jun 2025

- **Cloud Cost Optimization Platform:** Designed cost-optimization workflows using Terraform, AWS, GCP, and CI/CD pipelines, enabling automated infrastructure provisioning.
- **Scalable Infrastructure Automation:** Orchestrated scaling across 10+ databases and Kubernetes clusters using Lambda and EventBridge, saving approx. \$7,000/month.
- **Monitoring & Reliability:** Implemented Datadog and Slack-based monitoring, improving failure detection coverage by 40% and reducing deployment failures by 10%.

Technical Skills

Backend: .NET Core, C#, REST APIs, Distributed Systems, Microservices, Event-Driven Architecture, Message Queues (NATS), System Design, Scalability

Languages: C#, TypeScript, JavaScript, C++, Python, SQL

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitLab CI/CD, Terraform, Infrastructure as Code (IaC), Serverless

Tools: Postman, Swagger, Git, Datadog, Firebase, FCM

Frontend: React, TypeScript

Databases: MySQL, MongoDB

Achievements

- **ACM ICPC 2024 Regionalist** (Team: Algo Primes).
- **Google Kickstart Rank 1422.**
- **LeetCode Top 2%** (1000+ problems solved, Max Rating: 2059).
