Summary

Software Engineer with 1+ year experience building high-throughput distributed systems (5k–10k jobs/day) using C#/.NET, AWS, and React. Immediate joiner skilled in microservices, event-driven architecture, and scalable API development, powering platforms used by 3k+ active users and generating \$4k+ annual revenue.

Education

Indian Institute of Information Technology Guwahati (IIITG)
B.Tech in Computer Science Engineering

2021 - 2025

Professional Experience

Software Engineer at Connection Loops

Aug 2025 – Present

- Architected and deployed a scalable push notification infrastructure using **C#/.NET** and **Firebase Cloud Messaging (FCM)**, enabling real-time notifications across multiple workflows.
- Built a configurable communication framework supporting **10k+ notifications/month** based on dynamic user context and configurations.
- Developed a **B2B billing and invoicing module**, contributing to **\$500+/month revenue**.
- Engineered a **Daily Subscription system**, used by **3k+ active users** and generating **\$4k+ annually**.
- Developed a distributed job-processing system (**CLJPS**) using **C# + NATS**, handling **5k+ jobs/day** with high throughput and low latency.
- Optimized **event-driven architecture** using message queues (NATS), improving scalability and asynchronous processing efficiency.
- Built scalable REST APIs and **React-based dashboards** supporting **1000+ invoices/month**, improving operational visibility.
- Reduced storage usage by **15%** by implementing background cleanup services.
- Streamlined billing and notification workflows, reducing manual operational overhead.

DevOps Engineer at Alteryx Inc.

Jan 2025 – Jun 2025

- Architected cost-optimization workflows using **Terraform-based Infrastructure as Code (IaC)** integrated with **CI/CD pipelines** across **AWS and GCP**, enabling **fully automated infrastructure provisioning**.
- Orchestrated scaling across **10+ database instances and Kubernetes clusters** using Lambda, EventBridge, and GitLab CI, saving approx. **\$7,000/month**.
- Resolved ArgoCD rollout and sync issues, reducing deployment failures by **10%** and improving release reliability.
- Implemented **Datadog and Slack-based monitoring and alerting**, improving failure detection coverage by **40%**.

Technical Skills

Backend: .NET Core, C#, REST APIs, Distributed Systems, Microservices, Event-Driven Architecture, Message Queues (NATS), System Design, Scalability

Languages: C#, TypeScript, JavaScript, C++, Python, SQL

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitLab CI/CD, Terraform, Infrastructure as Code (IaC), Serverless

Tools: Postman, Swagger, Git, Datadog, Firebase, FCM

Frontend: React, TypeScript

Databases: MySQL, MongoDB

Achievements

- **ACM ICPC 2024 Regionalist** (Team: Algo Primes).
- **Google Kickstart Rank 1422**.
- **LeetCode Top 2%** (1000+ problems solved, Max Rating: 2059).
